BALA HARIHARAN B

Data Analyst

Chennai, India | 9361052234 | balahariharan21@gmail.com | linkedin.com/in/balahariharanb/ | github.com/Balahari29

PROFESSIONAL SUMMARY

Data Analyst and Computer Science graduate (2026, GPA 8.7) with 6 months of internship experience automating business reports using Excel, Pivot Tables and Power Query. Built two end-to-end analytics projects: a 9-table MySQL model of 99K e-commerce orders with hypothesis testing and RFM segmentation, and an API-to-Power BI pipeline analysing 1,878 Indian job postings. Skilled in SQL (CTEs, window functions), Python (pandas, SciPy), Power BI (DAX, data modeling) and Excel.

TECHNICAL SKILLS

- **Programming:** Python (pandas, NumPy, SciPy, Matplotlib, Seaborn), SQL
- **Data Visualization & BI Tools:** Power BI (DAX, Data Modeling, Power Query), Excel (Pivot Tables, XLOOKUP, Power Query, What-If Analysis)
- **Databases:** MySQL (Joins, CTEs, Window Functions, Subqueries, Views)
- **Data Handling:** Data Cleaning, Data Validation, Data Transformation, ETL, API Integration, Regex
- **Statistical Analysis:** Hypothesis Testing, Confidence Intervals, Correlation, Cohort Analysis, RFM Segmentation
- **Other Tools:** Git/GitHub, Jupyter Notebook, draw.io

EXPERIENCE

Data Analyst Intern — BDreamz Global Solutions Pvt Ltd | May 2026 – Oct 2026

- Tracked daily, weekly and monthly business KPIs in Excel, using Pivot Tables and charts to surface trends and gaps.
- Cleaned and standardised raw data from internal and external sources (duplicates, inconsistent formats, missing values) to deliver reliable, analysis-ready datasets.
- Automated recurring weekly and monthly reports with Power Query, Excel formulas and Pivot Tables, replacing manual copy-paste steps and reducing report turnaround time.
- Translated analysis into concise business summaries for management to support data-driven decisions.

PROJECTS

Olist Customer Retention & Delivery Analysis — MySQL, Python, Excel, Power BI | *github.com/Balahari29/olist-retention-analysis*

- Modelled 99K orders (9 tables) in MySQL with 19 data-quality checks, catching an ID issue that hid repeat buyers.
- Showed late deliveries cost 2.02 review stars (Mann-Whitney test, $p < 0.001$, large effect) and found 74% of those reviews were written before the parcel arrived; recommended post-delivery surveys and proactive delay alerts.
- Segmented 94.7K customers with RFM analysis: “New – high value” buyers are 16% of customers but 29% of revenue; proposed a second-purchase campaign with a holdout group to measure lift.
- Built an Excel seller scorecard (XLOOKUP, What-If) ranking 625 sellers by excess late orders, and designed a Power BI star schema and DAX measures with SQL-computed expected values for testing.

Data Analyst Job Market Analyzer (India) — Python, SQL, Power BI, DAX, API Integration | *github.com/Balahari29/data-analyst-job-market-analyzer*

- Built an end-to-end data pipeline: collected 2,020+ job postings across 8 Indian cities via the Adzuna API (Python), deduplicated them to 1,878 unique postings and loaded them into a relational MySQL database.
- Analysed skill demand, salary and hiring by city and industry using SQL joins, subqueries and RANK() OVER.
- Built a regex skill-extraction pipeline for 14 skills: SQL was the most in-demand (8.7% of postings vs 5.2% for Python), and 61% of Python postings also required SQL. Counts are a lower bound, as the API returns truncated job descriptions.
- Built a 3-page interactive Power BI dashboard (market overview, skill co-occurrence, industry, compensation) with custom DAX measures, validated against the underlying SQL tables.

CERTIFICATIONS

- **Data Analytics Program** — Besant Technologies, Tambaram, Chennai | 2026
- **Data Visualization** — IBM

EDUCATION

B.E., Computer Science and Engineering

Hindusthan College of Engineering and Technology, Coimbatore | 2026

GPA: 8.7 / 10
